

The Ratiocination Inculcator

1999-2000 Academic Year, Number 4

<http://www.clearlight.com/~ccs/logic/>

One Quarter Done

The first quarter of the school year is over. We were able to accomplish quite a bit during the quarter.

Overall, I'm very pleased with how well the students have learned the material, and, at least on Logic Olympics days, the enthusiasm they have shown for it.

The grade that your child will have on the report card is based on seven individual assignments, six group assignments, three tests, and a class participation grade. Please let me know if you have any questions about your child's grade.

Because we will be covering more difficult material in the second quarter than we did in the first, do not be surprised if your child's average for the second quarter is as much as 5-10 points lower than it was for the first quarter. I still believe that everyone should be able to get a B or better for the quarter.

See What You Know

Here are some questions that your children are generally able to answer. If you have the time, you might enjoy seeing how well you can answer these questions.

1. What is the difference between a valid argument and an invalid one?
2. What is a sound argument? Can an argument be valid, but not sound?
3. Is the following argument valid? If it is raining, then I will get wet. I am wet. Therefore, it must be raining.
4. What is the difference between a deductive argument and an inductive argument?
5. What does Proverbs 25:28 say?
6. How many different forms of categorical syllogisms are there?

7. Give an example of the *ipse dixit* informal fallacy.

8. What is the mood and figure of the following syllogism? All logic students are bright people. All bright people are lovers of baseball. Therefore, all logic students are lovers of baseball.

9. Give an example of an EAO-2 syllogism.

10. Show by counterexample why an EOO-3 syllogism is invalid.

11. Of the following argument forms, which are valid: modus ponens, modus tollens, asserting the consequent, and denying the antecedent?

12. What are the four forms of categorical statements?

13. Translate the following into the appropriate categorical statement: If an animal is a cat, then it is clever.

14. Is this syllogism in standard order? Some dogs are not hairy animals. All hairy animals are allergy-inducing animals. Therefore, Some dogs are not allergy-inducing animals.

15. Give an example of the *ad baculum* fallacy.

A Dickens Christmas

Don't forget that the auction/dinner is coming up on November 19. If you haven't turned in your reservations yet, please do so soon. Also, please continue to spread the word to your friends, co-workers, neighbors, and acquaintances. The more folks who come and bid on items, the greater the benefit to the school.
